Gary,

I see that the EPA has about \$275,000 left of its \$2 million budget for CES remediation. When this money is gone, will the TCEQ take over regardless of the status of the EPA's work, or will the EPA appropriate additional funds to complete the liquids removal if needed?

The EPA has appropriated additional funds for me to complete the action. We may just be over the budget by just a little. I have sufficient money to complete the action. The TCEQ has spent close to \$ 500,000 on disposal. They are trying to reconcile what they have spent so far and if they have additional and we have additional disposal they will help out.

Does the TCEQ still have only \$500,000 available at this time for cleanup activities, or have the programmed additional funds for cleanup that you know of?

The TCEQ has spent most of their money on disposal. I don't believe they will be adding additional funds to this. Keep in mind that we are close to an agreement with the PRP Group to continue response actions at the site. We are hoping they can do a proper transition with us so work does not stop.

I heard some time ago that the trustee was going to let someone come in and scrap the buildings and they would be compensated through the sale of the metals. Do you know if this is still happening?

I think they filed a motion with the court to do this but they would have to work through me to do this while we are on-site. I have not heard from the scrap guys so I don't know for sure that it went through.

Thanks again,

Gary Moore

Gary,

Thank you for the update and all your hard work in cleaning up this site. It looks like the EPA is making good progress in removing the liquids and containers from the site. I haven't been able to drop by the site for a couple of months, but (b) (6) tells me that the odor from the site is greatly reduced.
